

#### NAME

TAP::Parser::Iterator::Stream - Internal TAP::Parser Iterator

#### **VERSION**

Version 3.17

## **SYNOPSIS**

```
# see TAP::Parser::IteratorFactory for preferred usage
# to use directly:
use TAP::Parser::Iterator::Stream;
open( TEST, 'test.tap' );
my $it = TAP::Parser::Iterator::Stream->new(\*TEST);
my $line = $it->next;
```

# **DESCRIPTION**

This is a simple iterator wrapper for reading from filehandles, used by *TAP::Parser*. Unless you're subclassing, you probably won't need to use this module directly.

## **METHODS**

## **Class Methods**

new

Create an iterator. Expects one argument containing a filehandle.

#### **Instance Methods**

next

Iterate through it, of course.

#### next raw

Iterate raw input without applying any fixes for quirky input syntax.

wait

Get the wait status for this iterator. Always returns zero.

exit

Get the exit status for this iterator. Always returns zero.

## **ATTRIBUTION**

Originally ripped off from Test::Harness.
