NAME

CPANPLUS::Module::Fake

SYNOPSIS

```
my $obj = CPANPLUS::Module::Fake->new(
        module  => 'Foo',
        path    => 'ftp/path/to/foo',
        author  => CPANPLUS::Module::Author::Fake->new,
        package => 'fake-1.1.tgz',
        _id     => $cpan->_id,
    );
```

DESCRIPTION

A class for creating fake module objects, for shortcut use internally by CPANPLUS.

Inherits from `CPANPLUS::Module`.

METHODS

new(module => $mod, path => $path, package => $pkg, [_id => DIGIT])

Creates a dummy module object from the above parameters. It can take more options (same as `CPANPLUS::Module->new` but the above are required.
